Where to use it

Used for digital platforms, subtle branding, and modern applications:

- App icons
- Buttons or UI elements
- Social media posts
- Pattern creation
- Stickers and pins
- Embroidery (caps, uniforms, small-scale merch)
- Packaging details
- Signage details like corner marks or stickers

Brand Mark Variations

The full-color logo should be used whenever brand colors can be displayed clearly and with proper contrast. Apply it only on clean, light, or neutral backgrounds, or on images that provide enough clarity for all elements to remain visible. If the background is busy, dark, or reduces legibility, switch to the black or white logo versions to maintain consistency and readability.

Clear Space

Clear Space is the protected area around the logo that must always stay empty. It ensures the logo remains readable, uncluttered, and visually strong. The size of this space is defined using a unit taken from the logo itself, ensuring consistency across all applications.

Improper Usage

As a general rule do not adjust or alter the brand mark assets in any way. Here are some tips to ensure legibility in your communications.

Note:
These examples of Improper usage applies to all versions of the logo and all variations.

Do not change the colors of the logo, unless it is allowed in the guidelines.

Do not change the proportions of the logo, nor apply any distortion.

Do not apply any effects such as drop shadow...

Do not change the trsparency of the logo

Do not blur the logo.

Do not rotate the logo.

Do not use stroke.

Do not remove any part of the logo.

Do not outline the logo.

Color Palette

PRIMARY COLORS

The primary color palette represents the core identity of the brand. These colors are used most frequently across all applications and serve as the foundation for visual consistency. They should dominate key touchpoints such as logos, backgrounds, typography, and major design elements to maintain a strong and recognizable brand presence.

Color Palette

SECONDARY COLORS

The secondary color palette supports and enhances the primary colors. These tones add flexibility, depth, and variation to the visual system. Use them for accents, highlights, patterns, illustrations, and supplementary design elements. They should never overpower the primary palette but instead complement it and expand the brand's creative range.

Typography

Typography is a key element of the brand’s visual identity. The chosen typefaces establish hierarchy, readability, and personality across all applications. The Primary font (Raleway) is used for the logo, headings, and prominent messaging, while the secondary font (General Sans) supports body text, captions, and supplementary content. Consistent use of type ensures clarity, strengthens brand recognition, and creates a cohesive visual system across digital and print platforms.
